

Article 6 Alignment Memo

Paris Agreement 6.2 / 6.4 compliance posture and corresponding-adjustment regime for CCAFEE-class instruments.

Article 6.2 — Cooperative Bilateral

CCAFEE instruments issued under Article 6.2 are structured to clear bilateral cooperative review. Authorization letters, corresponding adjustments, and host-nation registry entries are first-class concerns of the architecture — not after-the-fact paperwork.

Article 6.4 — Centralized Mechanism

Article 6.4 instruments carry the highest WAR premium in the doctrine, reflecting the centralized mechanism's integrity floor and Supervisory Body oversight.

Voluntary Sub-Class

Voluntary-market instruments are accepted under a clearly disclosed sub-class with a transparent integrity discount. They are never co-mingled with sovereign-tier issuance.

Tier 1 Foundational Provision

Each verified CCAFEE-class instrument carries a \$72,450 foundational provision — the minimum integrity buffer required for an instrument to qualify as Sovereign Tier 1. The provision capitalizes the dMRV-30 pipeline, the ledger registry, the WAR scoring infrastructure, and the SIP structuring desk for that instrument's lifetime.

PROVISIONAL
